

# FUEL SYNTHESIS

## Blending

FT Synthetic Paraffinic Kerosene (FT-SPK) is drop-in, jet-fuel-compatible with existing commercial airline engines, blended up to 50% with conventional jet fuel.

## Co-Processing

AIR TO FUELS™ FT Crude can be directly blended with conventional fuel up to 5% without any additional processing necessary.

1PointFive is also exploring alcohol-to-jet processes as an alternate to FT.
